Our Document Automation Project combines programming, legal expertise, high-quality templates and a robust digital platform.

Document automation significantly reduces time spend on drafting and manually filling in templates. Word documents include code which automatically alters text and fills in variables based on input provided by the user in an online questionnaire.

Automation reduces time and enhances quality by ensuring that all options selected or data provided by the user in the questionnaire automatically alters the template following a pre-programmed recipe.

The first drafts can be downloaded and shared as regular Word-documents and can be tailored further or used in negotiations as usual.

In-house legal may save a significant amount of time by giving the business side access to questionnaire.

Automated templates delivered to BAHR in order to increase effectivity and lower costs for BAHR's clients.

Automated BAHR templates delivered directly to client in order to save time and resources spent by in-house legal.

Automated versions of clients' internal templates delivered directly to client.

Hours spent on first draft of loan term sheet
